

# Product Requirements Document (PRD)

## Personal Portfolio Website for Sree Charan Addala

### 1. Product Summary

#### Product Name

Sree Charan Addala — Fintech Data & Systems Portfolio

#### Product Type

Personal portfolio website for career positioning, recruiter screening, and professional networking.

#### Primary Positioning

Sree Charan Addala is a **fintech-focused data and systems analyst** with a software engineering background, using SQL, Python, Power BI, financial modelling, automation, and systems thinking to turn financial and operational data into business decisions.

#### Strategic Direction

The website should not look like a generic software engineering portfolio. The main audience is fintech recruiters and hiring teams. Backend/full-stack experience should be used as supporting proof that Sree can work with technical systems, APIs, databases, automation, and enterprise workflows.

The portfolio should present him as someone who can sit between data, business, and technology: someone who understands reporting, operational efficiency, financial analysis, SQL-based investigation, dashboards, and system logic.

---

### 2. Site Overview

#### Purpose

The purpose of this portfolio is to create a clear, recruiter-friendly online presence that positions Sree Charan Addala for fintech-oriented roles such as Financial Data Analyst, Data Analyst, Technical Business Analyst, Business Analyst in payments/banking, and analytics-focused product or operations roles.

The website should help visitors quickly understand:

1. Who Sree Charan Addala is.
2. What roles he is targeting.

3. How his background connects software engineering, data analytics, financial modelling, and business decision-making.
4. What measurable outcomes he has produced.
5. What skills and tools he brings.
6. How recruiters, hiring managers, or collaborators can contact him.

## Business Goals

- Increase recruiter trust within 10 seconds of landing on the site.
- Convert portfolio visitors into LinkedIn connections, resume downloads, and interview conversations.
- Present a consistent fintech/data analyst narrative.
- Showcase technical credibility without over-positioning as only a backend developer.
- Provide enough detail for hiring managers to understand project impact and work style.

## User Goals

Visitors should be able to:

- Understand Sree's target role and value proposition immediately.
- Scan his experience and metrics quickly.
- Review projects/case studies relevant to fintech, data, automation, reporting, and systems.
- Download his resume.
- Contact him easily.
- Visit his LinkedIn and GitHub/portfolio links.

---

## 3. Target Audience

### Primary Audience

**Fintech recruiters and hiring teams** looking for candidates with SQL, Python, Power BI, financial modelling, business analytics, and systems-thinking skills.

This includes recruiters hiring for:

- Financial Data Analyst
- Data Analyst — Fintech
- Technical Business Analyst
- Business Analyst — Payments / Banking / Financial Products
- Analytics-focused Product Operations roles
- Junior fintech data / systems analyst roles
- Reporting Analyst / Business Intelligence Analyst roles in financial services

The website should show that Sree can connect data, technical systems, and business workflows to improve reporting, automation, operational visibility, and decision-making.

## Secondary Audience

**Technical recruiters hiring backend, full-stack, data, or fintech-adjacent engineering roles.**

This audience should still see technical credibility through:

- Backend development experience
- SQL optimization
- APIs and integrations
- Docker
- CI/CD workflows
- Enterprise application experience
- Error handling and logging
- Automation and dashboard development

Backend/full-stack content should support the fintech/data story, not dominate it.

---

## 4. Source Content Extracted from LinkedIn PDF

### Name

Sree Charan Addala

### Current Headline

Financial Data Analyst | SQL, Python, Financial Modelling, Power BI | Turning Data into Actionable Business Insights | Helping Organizations Make Data-Driven Decisions | Transforming Numbers into Strategic Insights

### Location

Canada

### Contact

- Email: charanaddalaa7@gmail.com
- LinkedIn: [www.linkedin.com/in/sree-charan-addala-a5b51889](https://www.linkedin.com/in/sree-charan-addala-a5b51889)
- Existing Portfolio: [portfolio-dppm.vercel.app](https://portfolio-dppm.vercel.app)

### Important Privacy Rule

The LinkedIn PDF includes a street address and phone number. These should not be displayed publicly on the website unless Sree explicitly chooses to publish them. The public portfolio should show only Canada as the location, plus email, LinkedIn, and optional resume download.

## Summary Themes

- Software engineer with a backend-first mindset.
- Enjoys building simple, reliable, and scalable systems.
- Cares about clean code, clear logic, and solving real problems.
- Started career in sales and marketing at Instrukart.
- Gained exposure to customers, data, and business operations.
- Moved into software engineering because of curiosity about how technology drives growth and efficiency.
- Worked on backend logic, APIs, debugging, testing, automation, SQL, Docker, and CI/CD.
- Completed an MBA, strengthening ability to connect technical decisions to business outcomes.
- Currently looking for roles that combine ownership, curiosity, execution, scalable systems, and business impact.

## Top Skills

- Software Engineering
- Backend Development
- Docker

## Work Experience

### CGS (Computer Generated Solutions)

#### Associate Software Engineer

June 2022 – November 2023

Hyderabad, Telangana, India

Key achievements:

- Developed ERP modules using C#, WPF, and SQL, enabling enterprise-scale merchandise planning and analytics.
- Built reusable C# libraries and shared business logic, reducing development effort by approximately 20% across teams.
- Optimized complex SQL queries and stored procedures, improving query performance by up to 30%.
- Implemented structured error handling, logging, and CI/CD pipelines in Azure DevOps, reducing issue resolution time by approximately 35% and accelerating releases by approximately 25%.
- Integrated Dynamics 365 with external systems using APIs and Azure Integration Services, enabling real-time, event-driven workflows.

### CGS (Computer Generated Solutions)

#### Software Trainee

December 2021 – May 2022

Hyderabad, Telangana, India

Key achievements:

- Customized WPF UI components using DevExpress, improving usability and consistency across ERP modules.
- Implemented centralized error handling and logging frameworks, reducing post-deployment debugging time by approximately 30%.
- Developed Power BI dashboards by integrating operational data sources, reducing manual reporting by approximately 40%.
- Optimized SQL queries and database schemas, improving data retrieval performance by approximately 35%.

## **Instrukart Holdings**

### **Sales Analyst**

March 2020 – June 2021

Hyderabad, Telangana, India

Key achievements:

- Optimized product catalogues and Amazon Marketplace listings, increasing conversion rates by up to 25%.
- Analyzed sales and campaign performance data, contributing to 10–15% month-over-month revenue growth.
- Automated listing and operational processes, reducing manual effort by approximately 30%.
- Conducted competitor and market research, supporting the successful launch of 10+ new SKUs.

## **Education**

### **University Canada West**

Master of Business Administration — Business Administration, Management and Operations

January 2024 – June 2025

### **Indian Institute of Technology, Madras**

Advanced Certification in Data Science and AI — Artificial Intelligence

October 2021 – September 2022

### **Gitam University, Hyderabad**

Bachelor of Technology — Computer Science

June 2016 – June 2020

## **Certifications**

- Certified Digital Marketing Associate
- Data Analysis Using Python
- Data Visualisation in Tableau

## 5. Recommended Site Architecture

### Recommendation

Build the portfolio as a **single-page application / single-page website** using smooth-scroll navigation.

### Reasoning

The target audience is recruiters. Recruiters usually scan quickly and do not want to click through many pages to understand basic fit. A single-page structure allows the website to guide visitors through a clear story:

1. Fintech/data positioning
2. Business + software background
3. Measurable experience
4. Case-study style projects
5. Skills and tools
6. Education and certifications
7. Contact

### Optional Future Expansion

Add project detail pages later if there are stronger portfolio projects with screenshots, dashboards, GitHub repos, or case studies.

Future URLs could include:

- `/projects/financial-dashboard`
- `/projects/sql-performance-optimization`
- `/projects/erp-analytics-workflow`
- `/projects/marketplace-sales-analytics`

For version 1, keep it single-page.

---

## 6. Information Architecture

The website should include the following sections:

1. Header / Navigation
2. Hero / Landing Section
3. About Me
4. Impact Metrics Bar

5. Experience / Work History
6. Projects / Case Studies
7. Skills / Tech Stack
8. Education & Certifications
9. Working Style
10. Contact
11. Footer

Testimonials should only be included if real LinkedIn recommendations or written testimonials are available. Do not use fake testimonials.

---

## 7. Header / Navigation

### Purpose

Provide simple, fast navigation without distracting from the hero message.

### Content

Left side:

- Logo or initials: **SCA**

Navigation links:

- About
- Experience
- Projects
- Skills
- Education
- Contact

Primary CTA:

- **Download Resume**

Secondary CTA:

- **Let's Connect**

### Desktop Layout

- Sticky top navigation.
- Transparent on page load.
- Converts to subtle glass/blur background after scroll.
- Logo on the left.
- Navigation links in the center or right.

- CTA button on far right.

## **Mobile Layout**

- Logo left.
- Hamburger menu right.
- Menu opens as a full-screen or slide-down overlay.
- Include CTA button at bottom of mobile menu.

## **Interaction Requirements**

- Smooth scroll to each section.
  - Active section indicator.
  - CTA hover animation.
  - Keyboard accessible menu.
  - Close menu after link click on mobile.
- 

# **8. Hero / Landing Section**

## **Purpose**

The hero must communicate Sree's fit for fintech/data roles within 10 seconds.

## **Main Message**

Sree is not just a data analyst and not just a software engineer. The strongest message is that he understands data, systems, automation, reporting, and business decisions.

## **Hero Content**

### **Eyebrow**

**Fintech-Focused Data & Systems Analyst**

### **Main Heading**

**Turning financial data, systems, and workflows into clear business decisions.**

### **Short Intro**

I'm Sree Charan Addala, a financial data analyst with a software engineering background. I use SQL, Python, Power BI, financial modelling, and systems thinking to analyze data, automate workflows, improve reporting, and help teams make better decisions.

## Primary CTA

**View My Work**

## Secondary CTA

**Download Resume**

## Optional Third Link

**Connect on LinkedIn**

## Supporting Stats

Display 3–4 metrics in a horizontal row:

- **30–40%** reporting/debugging workflow improvements
- **2+ years** enterprise software and analytics experience
- **10–15%** month-over-month revenue growth contribution
- **MBA** with software engineering foundation

## Visual Layout

Inspired by the provided screenshots:

- Large editorial typography.
- Strong whitespace.
- Minimal top navigation.
- Optional professional portrait area.
- Floating tags around hero area.
- Tags may include: SQL, Python, Power BI, Financial Modelling, Automation, Dashboards, APIs.

## Animation

- Hero text fades upward on load.
- Skill tags appear with staggered animation.
- CTA arrow moves slightly on hover.
- Scroll indicator appears at bottom.

## Design Caution

Avoid making the hero look like a product designer portfolio only. The visuals can be design-inspired, but the messaging must be clearly fintech/data/business oriented.

---

## 9. About Me Section

### Purpose

Tell the career story in a way that explains why Sree's mixed background is useful for fintech/data roles.

### Section Heading

#### About Me

### Recommended Copy

I work at the intersection of data, business workflows, and technical systems. My background started in sales analytics, where I worked close to product catalogues, marketplace performance, customer behavior, and business operations. That experience helped me understand how data supports revenue, efficiency, and decision-making.

I later moved into software engineering, working on enterprise applications, backend logic, APIs, SQL optimization, automation, reporting dashboards, debugging, and CI/CD workflows. This gave me a stronger understanding of how data moves through systems and how reliable software improves business operations.

Today, I'm focused on fintech-oriented data and systems roles where SQL, Python, Power BI, financial modelling, and business analysis can create measurable impact. I bring a practical mix of technical depth, analytical thinking, and business context through my MBA and engineering experience.

### Layout

- Two-column layout.
- Left column: large title, short quote, or profile image.
- Right column: 3 short paragraphs.
- Below text: 4 value cards.

### Value Cards

#### Data Analysis

SQL, Python, Power BI, dashboards, and reporting workflows.

#### Financial & Business Thinking

MBA background, financial modelling, marketplace analysis, and decision support.

#### Systems Understanding

Backend logic, APIs, databases, integrations, and enterprise workflows.

## Automation Mindset

Reducing manual work, improving reliability, and making operations easier to scale.

## Interaction

- Cards reveal on scroll.
  - Hover effect highlights each card's theme.
- 

# 10. Impact Metrics Bar

## Purpose

Give recruiters proof before they reach the full experience section.

## Layout

A horizontal metrics strip after the About section.

## Metrics

Use these metrics from LinkedIn content:

1. **40% reduction** in manual reporting through Power BI dashboards.
2. **35% faster** issue resolution through structured error handling, logging, and CI/CD.
3. **30% improvement** in SQL query or data retrieval performance.
4. **25% increase** in Amazon Marketplace conversion rates.
5. **10+ SKUs** supported through market research and product launch work.

## Visual Style

- Large numbers.
  - Short text labels.
  - Minimal icons.
  - Accent color on numbers only.
- 

# 11. Experience / Work History Section

## Purpose

Show relevant proof through roles, responsibilities, technical tools, and measurable outcomes.

## Section Heading

### Experience

### Layout

Use a card-based timeline.

Each experience card should include:

- Company
  - Role
  - Dates
  - Location
  - Role type label
  - 3–5 achievement bullets
  - Skill tags
  - Metrics highlighted visually
- 

### Experience Card 1

#### Company

CGS (Computer Generated Solutions)

#### Role

Associate Software Engineer

#### Dates

June 2022 – November 2023

#### Location

Hyderabad, Telangana, India

#### Positioning Label

Enterprise Systems · SQL · APIs · CI/CD

#### Description

Worked on enterprise software systems involving ERP modules, backend logic, SQL optimization, integrations, reusable business logic, structured error handling, and CI/CD workflows.

### Bullets

- Developed ERP modules using C#, WPF, and SQL, enabling enterprise-scale merchandise planning and analytics.
- Built reusable libraries and shared business logic, reducing development effort by approximately 20% across teams.
- Optimized complex SQL queries and stored procedures, improving query performance by up to 30%.
- Implemented structured error handling, logging, and CI/CD pipelines in Azure DevOps, reducing issue resolution time by approximately 35% and accelerating releases by approximately 25%.
- Integrated Dynamics 365 with external systems using APIs and Azure Integration Services, supporting real-time, event-driven workflows.

### Skills

SQL, APIs, Azure DevOps, CI/CD, Enterprise Systems, Dynamics 365, Azure Integration Services, C#, WPF

---

## Experience Card 2

### Company

CGS (Computer Generated Solutions)

### Role

Software Trainee

### Dates

December 2021 – May 2022

### Location

Hyderabad, Telangana, India

### Positioning Label

Dashboards · SQL · Reporting · UI Systems

### Description

Supported ERP application development, reporting dashboards, centralized logging, SQL optimization, and usability improvements.

### Bullets

- Customized WPF UI components using DevExpress, improving usability and consistency across ERP modules.

- Implemented centralized error handling and logging frameworks, reducing post-deployment debugging time by approximately 30%.
- Developed Power BI dashboards by integrating operational data sources, reducing manual reporting by approximately 40%.
- Optimized SQL queries and database schemas, improving data retrieval performance by approximately 35%.

### **Skills**

Power BI, SQL, DevExpress, Reporting, Logging, Dashboard Development, Data Integration

---

## **Experience Card 3**

### **Company**

Instrukart Holdings

### **Role**

Sales Analyst

### **Dates**

March 2020 – June 2021

### **Location**

Hyderabad, Telangana, India

### **Positioning Label**

Sales Analytics · Marketplace Data · Business Operations

### **Description**

Worked on marketplace performance, product catalogue optimization, sales and campaign analysis, competitor research, and operational process automation.

### **Bullets**

- Optimized product catalogues and Amazon Marketplace listings, increasing conversion rates by up to 25%.
- Analyzed sales and campaign performance data, contributing to 10–15% month-over-month revenue growth.
- Automated listing and operational processes, reducing manual effort by approximately 30%.
- Conducted competitor and market research, supporting the successful launch of 10+ new SKUs.

## Skills

Sales Analytics, Marketplace Operations, Product Data, Competitive Research, Process Automation, Reporting

---

## 12. Projects / Case Studies Section

### Purpose

Show practical proof aligned with fintech/data/systems roles.

### Important Rule

The LinkedIn PDF does not include a dedicated projects section. Do not invent fake projects. For version 1, project cards should be framed as **work-derived case studies** based on professional experience.

### Section Heading

#### Selected Work & Case Studies

### Intro Copy

A selection of work across reporting, SQL optimization, automation, enterprise systems, and marketplace analytics — focused on turning data and workflows into measurable business outcomes.

### Project Filters

Include filter chips:

- All
  - Data Analytics
  - SQL
  - Automation
  - Systems
  - Business Operations
- 

### Case Study 1: Operational Reporting Dashboard

#### Category

Data Analytics · Power BI · Reporting

## Summary

Built Power BI dashboards by integrating operational data sources to reduce manual reporting and improve visibility into business workflows.

## Problem

Manual reporting was time-consuming and limited visibility into operational performance.

## Solution

Created dashboards using integrated operational data, allowing users to track performance and reduce repetitive manual reporting tasks.

## Impact

- Reduced manual reporting by approximately 40%.
- Improved access to operational insights.
- Helped teams make faster reporting-driven decisions.

## Tools

Power BI, SQL, Operational Data, Dashboard Design, Data Integration

## CTA

[View Case Study](#)

---

## Case Study 2: SQL Performance Optimization

### Category

SQL · Database Optimization · Performance

### Summary

Optimized complex SQL queries, stored procedures, and database schemas to improve application performance and reporting speed.

### Problem

Slow queries and inefficient database structures affected reporting speed and application responsiveness.

### Solution

Improved SQL queries, optimized stored procedures, and refined database schemas for better data retrieval.

## Impact

- Improved query performance by up to 30%.
- Improved data retrieval performance by approximately 35%.

## Tools

SQL, Stored Procedures, Query Optimization, Database Schema Design

## CTA

[View Case Study](#)

---

## Case Study 3: Error Handling, Logging & CI/CD Reliability

### Category

Automation · Reliability · DevOps

### Summary

Implemented structured error handling, centralized logging, and CI/CD workflows to reduce debugging time and improve release efficiency.

### Problem

Issue resolution and post-deployment debugging required too much manual investigation.

### Solution

Added structured error handling, logging frameworks, and CI/CD pipelines using Azure DevOps.

## Impact

- Reduced issue resolution time by approximately 35%.
- Accelerated releases by approximately 25%.
- Reduced post-deployment debugging time by approximately 30%.

## Tools

Azure DevOps, CI/CD, Logging, Debugging, Error Handling

## CTA

[View Case Study](#)

---

## Case Study 4: Marketplace Sales Analytics

### Category

Business Analytics · Sales Data · Marketplace Operations

### Summary

Analyzed marketplace sales, campaign performance, competitor activity, and product catalogue data to improve conversions and support business growth.

### Problem

Marketplace performance depended on catalogue quality, pricing, product visibility, and campaign decisions.

### Solution

Optimized Amazon product listings, analyzed sales and campaign data, automated operational processes, and supported new SKU launches through competitor research.

### Impact

- Increased conversion rates by up to 25%.
- Contributed to 10–15% month-over-month revenue growth.
- Reduced manual effort by approximately 30%.
- Supported successful launch of 10+ SKUs.

### Tools

Sales Analytics, Marketplace Data, Excel, Reporting, Process Automation, Competitor Research

### CTA

[View Case Study](#)

---

## Case Study 5: Enterprise ERP Analytics Workflow

### Category

Enterprise Systems · Analytics · Workflow Design

### Summary

Developed ERP modules and shared business logic for enterprise-scale merchandise planning and analytics.

### **Problem**

Enterprise planning workflows required reliable modules, reusable business logic, and integration with external systems.

### **Solution**

Developed ERP modules, reusable libraries, SQL-backed logic, and real-time integrations with external systems.

### **Impact**

- Enabled enterprise-scale merchandise planning and analytics.
- Reduced development effort by approximately 20% through reusable business logic.
- Supported real-time, event-driven workflows through API and Azure integrations.

### **Tools**

ERP Systems, SQL, APIs, Dynamics 365, Azure Integration Services, C#, WPF

### **CTA**

[View Case Study](#)

---

## **13. Skills / Tech Stack Section**

### **Purpose**

Help fintech recruiters quickly match Sree with role requirements.

### **Section Heading**

### **Skills & Tools**

### **Layout**

Use grouped skill cards instead of one long list.

### **Primary Skills to Highlight**

These should appear visually larger or first:

- SQL
- Python
- Power BI
- Financial Modelling

- Data Analysis
- Systems Thinking
- Business Analysis
- Automation

## **Skill Categories**

### **Financial & Business Analysis**

- Financial Modelling
- Business Analysis
- Sales & Campaign Analysis
- Marketplace Analytics
- Operational Reporting
- Decision Support
- Competitor Research

### **Data & BI**

- SQL
- Python
- Power BI
- Tableau
- Data Analysis
- Dashboard Development
- Data Visualization
- Reporting Automation

### **Systems & Technical Analysis**

- APIs
- Backend Logic
- Enterprise Applications
- ERP Systems
- Dynamics 365
- Azure Integration Services
- Database Design
- Query Optimization

### **DevOps & Automation**

- Docker
- Azure DevOps
- CI/CD Pipelines
- Logging
- Error Handling
- Workflow Automation
- Debugging

## Software Engineering Foundation

- Software Engineering
- Backend Development
- C#
- WPF
- DevExpress
- Reusable Libraries
- Clean Logic

## Interaction

- Hovering over a skill shows related proof.
  - Example: Hovering over SQL shows “Used for ERP modules, query optimization, stored procedures, dashboards, and database schema improvements.”
- 

# 14. Education & Certifications Section

## Purpose

Build credibility for both business and technical audiences.

## Section Heading

### Education & Certifications

#### Education Cards

##### University Canada West

Master of Business Administration — Business Administration, Management and Operations  
January 2024 – June 2025

Positioning note: Business foundation for analytics, operations, decision-making, and management context.

##### Indian Institute of Technology, Madras

Advanced Certification in Data Science and AI — Artificial Intelligence  
October 2021 – September 2022

Positioning note: Technical foundation in data science, artificial intelligence, and analytical thinking.

##### Gitam University, Hyderabad

Bachelor of Technology — Computer Science  
June 2016 – June 2020

Positioning note: Software engineering and computer science foundation.

## **Certification Badges**

- Certified Digital Marketing Associate
- Data Analysis Using Python
- Data Visualisation in Tableau
- Data Analytics Essentials

## **Layout**

- Education cards in a 3-column layout on desktop.
- Certification badges below.
- On mobile, stack vertically.

---

# **15. Working Style Section**

## **Purpose**

Replace testimonials if no real recommendations are available.

## **Section Heading**

### **How I Work**

## **Cards**

### **Business-First Analysis**

I start by understanding the business question, not just the dataset. The goal is to connect data work to decisions, efficiency, revenue, or risk.

### **System-Aware Thinking**

My software engineering background helps me understand where data comes from, how systems interact, and why workflow reliability matters.

### **Clear Communication**

I explain technical and analytical work in a way that business stakeholders can understand and act on.

### **Automation Mindset**

I look for repeated manual work that can be simplified through dashboards, scripts, workflows, or better system design.

---

## 16. Contact Section

### Purpose

Convert visitors into recruiter conversations, networking calls, and hiring opportunities.

### Section Heading

Let's Connect

### CTA Copy

Looking for someone who can connect financial data, business workflows, and technical systems? I'm open to fintech data analyst, technical business analyst, and analytics-focused roles.

### Contact Methods

Display:

- Email: charanaddalaa7@gmail.com
- LinkedIn link
- Resume download
- Optional GitHub link if available

### Contact Form Fields

- Name
- Email
- Company / Organization
- Message

### Button Copy

Send Message

### Form Requirements

- Validate required fields.
- Show clear success message.
- Show error message if submission fails.
- Include fallback email link.
- Add hidden honeypot field for spam prevention.

### Privacy Rule

Do not display street address publicly. Do not display phone number unless explicitly requested.

---

## 17. Footer

### Content

- Sree Charan Addala
- Short positioning line: Fintech-focused data and systems analyst using SQL, Python, Power BI, financial modelling, and software engineering experience to support better business decisions.
- Links:
  - LinkedIn
  - Email
  - Resume
  - GitHub, if available
- Copyright:
  - © 2026 Sree Charan Addala. Built with Next.js and Tailwind CSS.

### Layout

Minimal footer with a thin top border or dark background.

---

## 18. Design & Style Guidelines

### Visual Direction

The website should be inspired by the uploaded design screenshots: modern portfolio layouts, large typography, clean whitespace, card-based sections, and bold visual hierarchy.

However, it should not become too playful or designer-focused. The site must still feel credible for fintech recruiters.

### Overall Style

**Minimal, bold, editorial, fintech-friendly, and slightly product-focused.**

### Design Personality

- Clean and confident.
- Modern but not flashy.
- Professional but not boring.
- Strong whitespace.
- Card-based storytelling.
- Metrics as visual anchors.

### Light/Dark Preference

Use **light mode as the default** with optional dark sections for contrast.

Recommended use:

- Hero: light background.
- About: light background.
- Experience: light or soft gray.
- Projects: dark section for stronger contrast.
- Skills: light background.
- Contact: dark or accent section.

## Color Palette

### Light Mode

- Background: Warm off-white — #F6F4EF
- Primary Text: Near black — #111111
- Secondary Text: Slate gray — #5F6368
- Soft Surface: Light gray — #E9ECEF
- Border: Muted gray — #D7DADC
- Primary Accent: Fintech yellow/gold — #F5B21A
- Secondary Accent: Deep charcoal — #1C1C1C
- Data Accent: Teal — #14B8A6
- Success Green: #22C55E

### Dark Sections

- Dark Background: #111318
- Dark Surface: #1E222A
- Dark Text: #F5F5F5
- Muted Dark Text: #A7ADB8
- Accent: #F5B21A
- Border: #2D333D

## Typography

Recommended fonts:

- Headings: Space Grotesk
- Body: Inter
- Alternative heading fonts: Satoshi, Manrope, or Neue Haas Grotesk

Typography rules:

- Hero heading desktop: 64–96px.
- Hero heading mobile: 42–52px.
- Section headings desktop: 40–56px.
- Section headings mobile: 32–40px.
- Body text: 16–18px.
- Use tight letter spacing for large headings.

- Use comfortable line height for readability.

## Layout Principles

- Max content width: 1200px.
- Use 12-column grid on desktop.
- Use section padding of 96–140px desktop.
- Use section padding of 64–88px mobile.
- Keep paragraphs short.
- Use metrics, cards, and tags for scanning.
- Avoid dense resume-like text blocks.

## Animation & Microinteractions

Use Framer Motion or CSS transitions.

Recommended:

- Fade-up section reveal.
- Staggered card entrance.
- Smooth scroll navigation.
- Skill pill hover lift.
- Project card hover border glow.
- CTA arrow slide.
- Subtle number count-up animation for metrics.

Avoid:

- Heavy parallax.
- Long loading animations.
- Excessive bouncing effects.
- Too many gradients.
- Motion that slows down scanning.

---

## 19. Technical Requirements

### Recommended Framework

Next.js with TypeScript.

### Styling

Tailwind CSS.

## **Animations**

Framer Motion.

## **Icons**

Lucide React or React Icons.

## **Deployment**

Vercel.

## **Rendering Strategy**

Static site generation where possible.

## **Performance Requirements**

- Lighthouse Performance: 90+
- Accessibility: 95+
- SEO: 95+
- Best Practices: 95+

## **Performance Implementation**

- Use Next.js Image for images.
- Compress all images.
- Lazy-load below-the-fold visuals.
- Avoid heavy third-party scripts.
- Use SVG icons.
- Minimize animation complexity.
- Use font optimization.

## **Accessibility Requirements**

Follow WCAG 2.1 AA:

- Semantic HTML.
- Proper heading hierarchy.
- Keyboard accessible navigation.
- Visible focus states.
- Sufficient contrast.
- Form labels.
- Alt text for images.
- ARIA labels only where necessary.
- Reduced-motion support for users who prefer less animation.

## SEO Requirements

Include:

- Page title.
- Meta description.
- Open Graph title.
- Open Graph description.
- Open Graph image.
- Twitter card.
- Canonical URL.
- JSON-LD Person schema.
- Semantic HTML sections.

### Suggested Page Title

Sree Charan Addala | Fintech Data & Systems Analyst

### Suggested Meta Description

Fintech-focused data and systems analyst with experience in SQL, Python, Power BI, financial modelling, automation, dashboards, business analytics, and software engineering.

### Suggested Open Graph Title

Sree Charan Addala — Fintech Data & Systems Analyst

### Suggested Open Graph Description

Portfolio of Sree Charan Addala, focused on SQL, Python, Power BI, financial modelling, automation, reporting, and systems thinking for fintech and business decision-making.

---

## 20. Content Strategy

### Tone of Voice

The website copy should be:

- Clear
- Practical
- Confident
- Business-oriented
- Recruiter-friendly
- Metric-driven
- Technical without being overly complex

## **Avoid**

Avoid weak phrases such as:

- Passionate problem solver
- Hardworking professional
- Tech enthusiast
- Results-driven professional without proof
- Dedicated team player

## **Prefer**

Use proof-based language:

- Reduced manual reporting by 40%.
- Improved query performance by 30%.
- Improved issue resolution time by 35%.
- Increased marketplace conversion rates by 25%.
- Connected technical systems to business outcomes.

## **CTA Strategy**

Primary CTA:

- View My Work

Secondary CTAs:

- Download Resume
- Connect on LinkedIn
- Contact Me

CTA placement:

- Hero section
- After projects section
- Contact section
- Footer

## **Information Flow**

The site should move from identity to proof:

1. Hero: target role and value proposition.
2. About: career story and positioning.
3. Metrics: proof of measurable impact.
4. Experience: professional credibility.
5. Projects: case-study evidence.

6. Skills: keyword and technical fit.
  7. Education: business + technical credibility.
  8. Contact: conversion.
- 

## 21. Component Requirements

Developer should create the following components:

### Layout Components

- Header
- Footer
- SectionWrapper
- SectionHeading
- CTAButton

### Page Sections

- HeroSection
- AboutSection
- MetricsBar
- ExperienceSection
- ProjectsSection
- SkillsSection
- EducationSection
- WorkingStyleSection
- ContactSection

### Reusable Components

- ExperienceCard
  - ProjectCard
  - SkillPill
  - SkillGroup
  - CredentialCard
  - MetricCard
  - ContactForm
  - SocialLink
  - Tag
- 

## 22. Suggested Data Structure

Use a centralized data file:

```
src/data/profile.ts
```

The file should include:

```
export const personalInfo = {
  name: "Sree Charan Addala",
  role: "Fintech Data & Systems Analyst",
  location: "Canada",
  email: "charanaddalaa7@gmail.com",
  linkedin: "https://www.linkedin.com/in/sree-charan-addala-a5b51889",
  portfolio: "https://portfolio-dppm.vercel.app/",
};

export const hero = {
  eyebrow: "Fintech-Focused Data & Systems Analyst",
  heading: "Turning financial data, systems, and workflows into clear business decisions.",
  intro: "I'm Sree Charan Addala, a financial data analyst with a software engineering background. I use SQL, Python, Power BI, financial modelling, and systems thinking to analyze data, automate workflows, improve reporting, and help teams make better decisions.",
  primaryCta: "View My Work",
  secondaryCta: "Download Resume",
};

export const metrics = [
  { value: "40%", label: "Reduction in manual reporting" },
  { value: "35%", label: "Faster issue resolution" },
  { value: "30%", label: "SQL query performance improvement" },
  { value: "25%", label: "Marketplace conversion increase" },
];
```

Keep all content data separate from UI components to make future updates easier.

---

## 23. Development Acceptance Criteria

The website is complete when:

1. The hero clearly positions Sree for fintech/data/systems roles within 10 seconds.
2. The primary audience is fintech recruiters, not generic software engineering recruiters.
3. Backend/full-stack experience supports the fintech/data story instead of overpowering it.
4. The site uses LinkedIn content accurately.
5. The public website does not expose street address.
6. Experience cards include measurable outcomes.
7. Case-study cards are based on real work experience and do not invent fake projects.
8. Skills are grouped around fintech, data, BI, systems, and automation.
9. Resume download works.

10. Contact form works or has a clear email fallback.
  11. Site is fully responsive across mobile, tablet, and desktop.
  12. Smooth scroll navigation works.
  13. SEO metadata is implemented.
  14. Accessibility requirements are met.
  15. Site visually matches the inspiration direction: clean, bold, modern, spacious, card-based, and editorial.
- 

## 24. Final Build Direction

Build a single-page Next.js portfolio that positions Sree Charan Addala as a **fintech-focused data and systems analyst** with software engineering credibility.

The portfolio should lead with SQL, Python, Power BI, financial modelling, business decision-making, automation, and systems thinking. Backend/full-stack experience should appear as technical proof that he understands how data and workflows operate inside real systems.

The final website should feel modern, bold, minimal, recruiter-friendly, and credible for fintech hiring teams.
